

FREQUENTLY ASKED QUESTIONS

HOW DROUGHT TOLERANT ARE THEY?

These are extremely tolerant of drought even in the first season. Make sure automatic sprinkler systems do not reach these.

WHERE DO I INCORPORATE THESE INTO GARDEN?

Plant as ground cover; add to rock gardens, graveled patches, slopes, and perfect for xeriscapes and modern compositions. It looks super planted along stone walls. Over time plants can spread to great widths, so it is wise to plant them where they can freely grow and prosper.

MY PLANTS ARE NOT FLOWERING WELL?

Usually they don't bloom prolifically till the second season. Hot, sunny conditions and good drainage keep the flowers coming all summer long. If planted in too much shade you can move them at any time of year. Plants growing under partial shade have grown exceptionally large with healthy foliage with average drainage. The only downside is that they don't bloom quite as much as those in the full sun.

ARE THEY EVERGREEN OR DECIDUOUS?

These are all evergreen in mild climates and cold climates unless temperatures are extreme. In very cold winter areas depending on snow cover, they may or may not defoliate. With snow adding protection they will almost always keep their leaves. Either way they will come back vigorously the next spring.

WHAT ARE SOME NICE COMPANION PLANTS?

Thymus, Sempervivum, Dianthus, Lamb's Ear, Bergenia, Euphorbia, Siberian Iris, Snow in Summer, Spring Bulbs and Day Lilies make nice companion plants.

FIRST THINGS FIRST...

When your plant arrives from Roberta's, remove from the shipping box immediately.

Remove netting and/or sleeve from around the tray. Discard any packing material clinging to the leaves or soil. If you cannot plant it into garden or larger pots within a few days, there is no need to water them yet. Place them outside if evening temperatures remain above 40F.

When ready to plant, do the job as early in the day as possible to avoid extreme soil temperatures that prevent proper water uptake from the roots. Water them in well and whisper a few words of wisdom.

The page features the Roberta's Gardens logo at the top left. The main title "Our Warranty (Perennials)" is in a large, stylized font. Below the title, a paragraph explains the warranty policy: "We aren't happy if you aren't happy. If you have any questions regarding your order please call us at 1-800-428-9726 during the hours of 8:30am and 4:30pm EST. You can email questions to us at: plantquestions@robertasinc.com. If your bulbs, cuttings etc. do not sprout, or your plant dies within one year from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll free number or fill out the plant replacement form on our website at www.robertasinc.com. Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year. Neither the retailer nor any other company involved in the sale or promotion of this product is a co-warriantor of this plant warranty."

ROBERTA'S GARDENS
PLANTING AND GROWING GUIDE

Cut & Plant Coco Fiber
Succulent Landscape
(Sedum & Delosperma hybrids)

QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE:	Full or Partial Sun
USDA HARDINESS ZONES:	5-9
PLANT TYPE	Perennial
PLANTING DISTANCE:	18-20 inches per 4 inch square cut out
MATURE HEIGHT/SPREAD:	foliage 3-4 inches, flowers 6-8 inches/ 18-20 inches wide
BLOOM TIME:	Summer (varies by variety)
PLANTING INSTRUCTIONS:	You can plant your tapestry as one piece or cut into no smaller than 4 inch squares, planting in the garden or in containers.

PLANTING GUIDE

1 STEP	<p>Remove netting and/or sleeve from around the tray. Discard any packing material clinging to the leaves or soil. If you cannot plant it into garden or larger pots within a few days, there is no need to water them yet. Place them outside if evening temperatures remain above 40F.</p>
2 STEP	<p>On the day of planting, simply cut the reinforced coco fibre mat into 4 inch squares and space 18 inches apart and watch it fill in like magic This "haircut" actually stimulates thicker growth.</p>
3 STEP	<p>You may cut them into smaller or larger pieces instead and they will grow just fine as well. There is no rule of thumb to follow.</p>
4 STEP	<p>Dig holes twice the width of the root ball and about 3 to 4 inches deep. Place them in their holes. Pack soil firmly around roots. Fill with soil and pack in firmly covering entire root zone. Water them in.</p>

CONTINUING CARE

CUT AND PLANT SPECS

On the day of planting, simply cut the reinforced coco fibre mat into 4 inch squares and space 18 inches apart and watch it fill in like magic. This "haircut" actually stimulates thicker growth. You may cut them into smaller or larger pieces instead and they will grow just fine as well. There is no rule of thumb to follow.

SOIL

Plants need a lean drained soil, sandy or rocky soil is preferred. Death from "Wet Feet" is a common occurrence in heavy soils.

GARDEN PREPARATION

Rake or till top layer of soil to loosen. They prefer full sun or ½ day sun. Plant as ground cover; add to rock gardens, graveled patches, slopes, and perfect for xeriscapes and modern compositions. It looks super planted along stone walls. Over time plants can spread to great widths, so it is wise to plant them where they can freely grow and prosper.

POTTED PLANTS

Rather than in the garden you may re-pot into large containers. Shallow containers work better than deep containers because they dry out faster.

PLANTING SPACING

For every 4 inch by 4 inch cut out, space them 18-20 inches apart.

PLANT HEIGHT AND WIDTH

The foliage on these grow about 3 to 4 inches tall and 18 to 20 inches wide depending on size of cut outs made. The flowers will grow an additional 3 to 4 inches above the foliage.

WATER

Water upon planting and minimally year round. These are very drought tolerant. Make sure automatic sprinkler systems do not reach these unless drainage is superb.

FERTILIZER

They respond to feeding with a high bloom fertilizer like Flower Magic plant food (M7503). Once a month is sufficient.

TEMPERATURE ZONES 5 to 10

When nights stay above 40 degrees, place your plants outside and leave them there. They can withstand winter temperatures to minus 15F.

LIGHTING

In the summer growing season, full sun is the absolute best. Otherwise a half a day of sun is sufficient.

BLOOMING

Under correct conditions, blooming begins summer. Each variety starts and ends a little differently.

PRUNING

Pruning is not necessary at all.

WINTER DORMANCY

There is nothing to do.
